A single exceptional case may double the range within which all of the cases lie, but manifestly this does not double the variability of the group. This figure, which we call $2Q$, is found by counting in from both the upper and lower limits until 25 of the cases have been covered, and then finding the range within which the remaining 50 of the cases lie. For instance, in Table X, in which there are 58 cases, we count off from the lower limit fifteen cases (25 - 14), which brings us to the group of three cities which spend 58 of their money for teaching; in like manner, counting from the other extreme, 25 of the cases are found to spend more than 67 of their money for teaching. The limits within which the middle 50 of the cases lie are, then, 58 and...
