Thus: 0.032 T ( T T ) ( S T ) e w w e e ( 66 ) T 1 ( S T ) w e e Therefore, when Sutherlands law is used, both of these correlations are functions not only of the ratio T T, but also of the freestream temperature T itself. For all of the work herein, T is chosen w e e to be 540 R. Contour plots of F for the three correlations are shown in Figs. 2 ( a )-( c ). Note that Re a different version of Fig. 2 ( b ) can also be found in Spalding and Chi 38 . Using Eq. ( 55 ) for the C value, results for the compressible C can be computed for each f, incomp f of the correlations. It turns out that results using van Driest and White Christoph are very similar, so only the results of van Driest and Spalding Chi are shown in Fig. 3 for clarity of presentation. Plots of C C are shown here for a variety of T T ratios, as well as for adiabatic wall f f, incomp w e 6 temperature. In all cases, an assumed Re of 5 10 was used. In terms of Re, this translates x 6 7 to approximately Re 14200, using the formula Re 0.0142Re from White 33 . For x the adiabatic case ( for which the most experimental data exist ), the correlations give...
