Not illustrated. 1922 Excerpt: . for non-irrigatable lands, and encourages farmers to plant more trees Experiments with vegetables for the home garden in the dry-land region. Livestock--Experiments with the feeding and housing of dairy cattle and economical pork production on the dryfarm. IMPORTANT RESULTS OBTAINED As a result of its experiments, the Cheyenne Experiment Farm has: Introduced and demonstrated a rust resisting spring wheat. Distributed Acme wheat in Laramie County, which increased the yield nine bushels per acre. Developed methods of tillage that increase the certainty and yield of winter wheat. Demonstrated that corn substituted for fallow in a spring wheat rotation increases profits. Proved that field peas are valuable for the production of forage and grain on the dry-farm. Demonstrated the value of beans as a cash crop. Cheyenne Experiment Farm Distributes High Yielding Spring Wheat in Laramie County (Diagram shows results of personal survey in 1924 Introduced crested...
