Whereas people have diverging notions of efficiency, we commonly agree about the meaning of productivity. The latter is a familiar and intuitive measure of economic performance that can be applied on different scales ranging from the individual worker up to whole nations (Färe et al., 2008). However, efficiency and productivity are strongly linked to each other through the various techniques by which the determinants of producer performance are measured. Efficiency can be defined as a comparison between observed and optimal values of the output and input level of a production unit (Lovell, 1993). Thereby, we may refer to the maximum output level that can be potentially obtained from a given input, or the minimum potential input level that is required to produce a given output....
